

# ERGO-SAT

## WIRELESS HAND HELD

## SATELLITE ACCELERATOR

Guidosimplex  
AUSTRALIA

Exclusive Features

Natural grip of the steering wheel using your thumb & fingers

Accelerate with your index finger - Better dexterity

Available From:

The Wireless Hand Held Satellite Accelerator is a radical new driving control that allows the user to effortlessly apply the accelerator with just the tip of their finger.

This accelerator system communicates directly with the fly-by-wire electronic throttle in your vehicle. Giving you precise and progressive control of the accelerator.

Both hands remain on the steering wheel meaning greater control of the vehicle and access to accessories. Combine with the PME Contoured brake bar for an unparalleled driving experience.

- Accompanied by PME's custom brake grip which contours to the vehicle's outer radius of the steering wheel, giving you the ultimate palm on and off style braking and more two hands on the wheel driving experience
- The system operates via a dedicated programmable CPU that directly interfaces with the vehicle's existing drive-by-wire accelerator system. This translates into fluid and responsive acceleration unmatched by other mechanical-type hand controls
- Available in left or right hand configurations
- Designed with attention to detail and manufactured using high quality components
- Apply throttle using your index finger allowing you to grasp the steering wheel more naturally than other products on the market
- Can be fitted to a wide range of vehicles including high performance vehicles such as rally/race cars and is interchangeable between vehicles
- Compact battery pack and wireless transmitter, feels much more comfortable on your hand without the undesirable Helix Cord attachments or bulky components
- Unique Feature - Can easily be switched between 2 driving modes, City and Sport, to suit the desired rate of acceleration in any driving conditions
- Interfaces with PME Knee Airbag Compatible Systems
- Adjustable strap to fit most hands and also available in XL sizes
- If you have driven with conventional type hand controls you definitely will not be disappointed with the latest technology from Guidosimplex.
